Lao PDR
As of 28 April 2017, there were 727 cases of dengue with no deaths reported in Lao PDR in 2017. During week 17, 102 dengue cases and no deaths were reported. The number of reported cases in 2017 is higher than those reported for the same time period in 2015 and 2016 (Figure 5).

![Figure 5: Number of Dengue cases per week, 2012-2017](image)

Viet Nam
As of 23 April 2017, 26,205 dengue cases including 7 deaths were reported in Viet Nam. Compared to the same period in 2016 (31,870 cases including 9 deaths), the cumulative number of cases decreased by 17.8%, and the number of deaths decreased by two. During week 17, there were 1,186 cases reported and with no deaths. This represents a decrease of 19.6% compared to week 16 when 1,475 cases and no deaths were reported (Figure 6). Majority of reported cases (74.8%) were still from the South (74.8%), and the region has a 53.8% increase in reported cases compared to same period last year. There has been a slight increase in number of cases reported in the Northern and Central Costal regions and number of cases decreased in the Central Highland region compared to same period last year.

Cambodia
As of 2 May 2017, a total of 256 suspected cases of dengue fever were reported in 2017. The total number of cases including dengue haemorrhagic fever and dengue shock syndrome was lower than the 3 year-threshold of the same period from 2014-2016 (Figure 7).

Southern Hemisphere
Australia
As of 9 May 2017, there were 452 laboratory-confirmed dengue cases reported in Australia in 2017. The number of cases reported is less than that reported during the same time period in the previous years (2012-2016) (Figure 8).
Pacific Islands Countries and Areas

French Polynesia (No update)
A total of 43 confirmed dengue cases were reported in French Polynesia between week 9 and week 10 (19 cases in week 9 and 24 cases in week 10) (Figure 9). Eleven (26%) of the 43 cases were confirmed as DENV-1 infection.
