

## Human infection with avian influenza A(H5) viruses

### Human infection with avian influenza A(H5N1) virus

From 11 to 17 April 2015, **no new case** of human infection with an avian influenza A (H5N1) virus was reported.

From February 2003 to 17 April 2015, 237 cases of human infection with avian influenza A (H5N1) virus were reported from four countries within the Western Pacific Region (Table 1). Of these cases, 134 were fatal, resulting in a case fatality rate (CFR) of 57%.

**Table 1: Cumulative number laboratory-confirmed human cases (C) and deaths (D) of influenza A (H5N1) virus infection reported to WHO (January 2003 to 10 April 2015), Western Pacific Region.**

Country	2003		2004		2005		2006		2007		2008		2009		2010		2011		2012		2013		2014		2015		Total	
	C	D	C	D	C	D	C	D	C	D	C	D	C	D	C	D	C	D	C	D	C	D	C	D	C	D	C	D

Viet Nam	3	3	29	20	61	19	0	0	8	5	6	5	5	5	7	2	0	0	4	2	2	1	2	2	0	0	127	64
<b>Total</b>	<b>4</b>	<b>4</b>	<b>29</b>	<b>20</b>	<b>73</b>	<b>28</b>	<b>15</b>	<b>10</b>	<b>16</b>	<b>11</b>	<b>11</b>	<b>9</b>	<b>13</b>	<b>9</b>	<b>10</b>	<b>4</b>	<b>9</b>	<b>9</b>	<b>9</b>	<b>6</b>	<b>30</b>	<b>17</b>	<b>13</b>	<b>6</b>	<b>5</b>	<b>1</b>	<b>237</b>	<b>134</b>

From February 2003 to 17 April 2015, there have been 788 cases of human infection with avian influenza A(H5N1) virus reported from 16 countries worldwide. Of these cases, 430 were fatal, resulting in a CFR of 55%.

### Human infection with avian influenza A(H5N6) virus

Since May 2014, three human cases of influenza A(H5N6) have been reported globally. All three cases were reported by China, with the last case reported on 9 February 2015.

### Public health risk assessment for human infection with avian influenza A(H5) viruses

Whenever avian influenza viruses are circulating in poultry, sporadic infections and small clusters of human cases are possible in people who have been exposed to infected poultry or contaminated environments. To date, human infections with avian influenza A(H5) viruses have occurred sporadically, with no sustained human-to-human transmission.

17 April 2015

## Human infection with avian influenza A(H7N9) virus in China

On 10 April 2015, the National Health and Family Planning Commission (NHFPC) of China notified WHO of 20 additional laboratory-confirmed cases of human infection with avian influenza A (H7N9) virus, including four (4) deaths.

Onset dates ranged from 14 February to 21 March 2015. Cases ranged in age from 32 to 80 years with a mean age of 55 years. Of these 20 cases, 15 (75%) were male. The majority (18 cases, 90%) reported exposure to live poultry. One case is a health care worker, who had also poultry exposure. No clusters were reported. Cases were reported from five provinces: Anhui (3), Fujian (2), Guangdong (4), Shandong (1), and Zhejiang (10). See attachment for individual case information.

WHO is assessing the epidemiological situation and conducting further risk assessment based on the latest information. Overall, the public health risk from avian influenza A(H7N9) viruses has not changed. Comparing with previous two months, the infection case number is decreasing and no new infected province was reported. Further sporadic human cases of avian influenza A(H7N9) infection are expected in affected and possibly neighbouring areas. Should human cases from affected areas travel internationally, their infection may be detected in another country during or after arrival. If this were to occur, community level spread is considered unlikely as the virus does not have the ability to transmit easily among humans.

### Public health risk assessment for avian influenza A(H7N9) viruses

On 23 February 2015, WHO conducted a public health risk assessment for avian influenza A(H7N9). This assessment found the overall public health risk from avian influenza A(H7N9) viruses has not changed since the previous assessment, published on 2 October 2014. To date, there has been no evidence of sustained human-to-human transmission of avian influenza A (H7N9) virus.

## Animal infection with avian influenza

From 11 to 17 April 2015 in the Western Pacific Region, animal infections with avian influenza viruses were reported in Hong Kong (SAR) and Taiwan, China.

### H5N6 HPAI outbreaks in birds, Hong Kong (SAR), China

One new outbreak of H5N6 HPAI infection in birds (Peregrin Falcon) was reported in Hong Kong (SAR) China.
